

Frederikssund, December 2011

Environmental Policy

The Roth Group's product concepts are designed to protect the environment. The Group therefore uses environmentally-friendly materials, including special plastics. The environment is very much to the fore with the Roth Group, as symbolized by our EcoEnergyCycle and EcoSeal.

Roth Nordic possess core competences within rainwater and solar, therefor it is natural that the Roth company has invested in a rainwater system for toilet flushing and a large solarplant at Roth Nordic headquarters in Frederikssund Denmark.

In 2011 Roth Nordic appointed a person which is responsible for all Environmental and Quality issues. This person handle all environmental questions and the coordination between Roth Werkes EMAS environmental management system and Roth Nordic. All Environmental issues has a high priority at all levels of the company.

Roth Nordic is currently considering to achieve a Nordic certificate on an environmental management system with detailed environmental goals including water-, gas-, power-, and paper-consumption.

Roth Nordic sets high environmental standards for primary suppliers both in terms of products and transport, but also for the packaging and wrapping which is being used in the logistics center. Roth Nordic only use shipping companies that have an environmental policy and an ISO certified environment management system.

In 2012 will there be added an environmental section in all our newly subscribed contracts with documented requirements of environmental policy's, environmental management system, and of course a demand for the supplier to complies with the EU's chemicals legislation REACH and RoHS notice.

Roth Nordic has for years used Scan Global as a primary supplier of transportation in the Nordic countries. Scan Global has a acknowledged environmental policy and has achieved the following certificates OHSAS 18001, ISO 9001 and 14001.

The packaging used in the logistics center is primarily from SCA Packaging. SCA is ISO certified and has like Roth a EMAS Environmental Management System.

Certificates of environmental management systems and ISO certificates from Roth Werke, Scan Global and SCA can be obtained by contacting Roth Nordic asking for the responsible person in Environmental and Quality issues.
